

## **What parents are saying about our Title I Program.**

“Reading Recovery improved (my son’s) reading a lot. He reads just about anything, including signs and also reads a lot to his baby brother.”

“I have seen lots of changes in my child because I used to have to read him directions but now he asks to read them himself instead.”

“My son is understanding what he is reading and can tell me about the story and sometimes writes his own stories also. It has helped his confidence as well.”

“(My daughter) has done so well with her reading and spelling and math and I am very proud of her accomplishment.”

“My daughter is more confident and independent with her reading which has made her feel better about herself.”

“I want to thank you for having this program in your classroom. It is a blessing to us when our child can read without much assistance and he loves reading.”

“When (my son) comes home, he is ready to do his homework now because he knows how to read it and his grades have really improved. He has confidence in himself now, he acts grown up now because he can read.”

“The Reading Recovery program and the teachers have been wonderful in helping with my daughter’s reading. They have taught her reading strategies that have improved her reading skills. This has given her more confidence and independence with her reading.”

“When my son began first grade he could not remember his ABCs. Now he can read at a second grade level. His self esteem has also gone off the charts.”

“Before this class my son almost seemed sad when he had to do school work and struggled so much. Now he is doing great and has confidence in what he does. He is finally proud of himself. Before this class he didn’t like to talk about school, now all he talks about is his accomplishments.”

“I just can’t say enough about this program or our teachers who have enough patience and energy to do what they do!”

“My child has gained a lot of confidence and self esteem. She thinks she can do anything she puts her mind to and sees herself as an achiever. She pays more attention to detail. She requires less time to complete work. She has decreased frustration. She likes to read directions now.”
